The MagneW Two-wire PLUS offers the stable and accurate measurement of a traditional magflow meter with low power consumption. The result is a lower overall cost of ownership.

FEATURES

Two-wire operation

MagneW Two-wire PLUS⁺ improves its noise immunity performance by 700% maximum and 250% in average. For the spike noise, MagneW Two-wire PLUS⁺ improves its noise immunity performance in 250% in average.

High accuracy and stable output

MagneW Two-wire PLUS⁺ provides high accuracy ($\pm 0.5\%$ of rate) and its output is as stable as current four wired magnetic flowmeters.

Minimum measurable fluid conductivity

The MagneW Two-wire PLUS⁺ offers a minimum process fluid conductivity of $10\mu\text{S}/\text{cm}$ which is the best among two-wire magflow meters thereby maximizing applicability.

Wider range in size

MagneW Two-wire PLUS⁺ offers wider range in detector size.
Detector size: 2.5 to 200 mm.

Wafer and flange style, integral and remote style available

The MagneW Two-wire PLUS⁺ is available integral or remote, flanged or wafer, making the selection of the right meter for the application simple.

Flow unit

Volume flow: m³, L, cm³, G (gallon), mG, kG,
B (barrel), IG (imperial gallon), mIG,
kIG

Mass flow: t, kg, g, lb

Time: d, h, min., s

Display**Display: LCD**

Main display: 7-segment, 8 digits

Sub display: 16 digits, 2 lines

Display contents:

Simultaneously displays % flow rate, Actual flow rate (eng. unit) and Totalized value.

Data setting

Operation by four key switches

Damping

Adjustable between 0.5 and 199.9 seconds.

Low flow cutoff

Adjustable between 0 and 10% of setting range.

Below selected value, output is driven to the zero flow rate signal level.

Dropout

Adjustable between 0 and 10% of setting range.

Below selected value, pulse output is cut.

Empty pipe detection

Detect empty pipe condition by monitoring flow rate signal. Once the flow rate signal fluctuates over a certain threshold, the device judges that the detector is empty. When the detector is empty, the analog output (4 to 20mA output) and pulse output are set to zero flow values. The display alternately shows zero value and "Empty Status".

There are three threshold levels to meet an environment where the device is installed. Set an appropriate threshold level from below.

SENSITIVITY HIGH

SENSITIVITY MID

SENSITIVITY LOW

Default setting: OFF

Operating condition:

The following conditions must be met when using the empty pipe detection function.

- Diameter: 10mm or larger
- Electric conductivity of fluid: 30 μS/cm or greater
- Grounding: Grounding resistance must be less than 100Ω
- The noise level must be over the set threshold when the pipe is empty.

The noise level must be under the set threshold when the process fluid flows in the detector.

Lightning protection

12 kV, 1000A

Equipped with the lightning arrester in the power source and external output terminals.

Power failure

An EEPROM retains data record of totalized value when pulse output is used (retention period approximately 10 years).

Power supply

15.6 to 42V DC (without communication)

21.05 to 42V DC (with communication)

Current capacity: 24mA min.

In case of current capacity is 22mA, the voltage must be 15.6V minimum.

For approval selection code "1", to maintain Intrinsic safety of system connect conductor to earth ground so that it has less than 1 Ohm to earth ground. See ANSI/ISA RP12.06.01 Installation of Intrinsically Safe Systems for Hazardous (Classified) Locations for guidance on installation of intrinsically safe apparatus and systems.
