RS-485/Analog Output Signal Converter
for ACTIVAL+™
Modbus™ Protocol / Standalone Model

General
Model RYY792C3001 is a signal converter that receives the analog data of Model FVY513_J/FVY514_J/FVY515_J via RS-485 communication and outputs the data via analog signal.

2 channels for 4 to 20 mA DC output are provided per 1 converter.

Master/slave communication is selectable by the switch, and up to 5 converters, 10 analog output points in other words, are configured.

Features
- Plug-in design for easy maintenance.
- Anti-drop mechanism of the mounting screw to enhance workability.

</tbody>
</table>

Communication system
RS-485, half-duplex

Number of units connectable
Max. 5 units connectable to the master converter (1 Model FVY513_J/FVY514_J/FVY515_J and 4 slave converters)

Communication distance
Max. 100 m

Analog output data setting
With the rotary switch for each channel

Master/slave switchover
With the switch (‘MASTER/SLAVE’ LED indicates the setting)

Materials
Main unit housing: ABS resin
Socket terminals: PBT resin

Running status indication
By LED flashing patterns

Conversion accuracy
Within ± 0.1 % F.S. (at 25 °C ± 5 °C)

Temperature characteristic
Within ± 0.2 % of span at 10 °C change

Dimensions
Refer to Fig. 2.

Accessory
Dedicated socket (Refer to Fig. 2.)

Auxiliary part
Part No. RYY-CS3700-11P

LED: Light-Emitting Diode
ABS: Acrylonitrile Butadiene Styrene
PBT: Polybutylene Terephthalate

Safety Instructions

Please read instructions carefully and use the product as specified in this manual. Be sure to keep this manual nearby for quick reference.

Usage Restrictions

This product is targeted for general air conditioning. Do not use this product in a situation where human life may be affected. If this product is used in a clean room or a place where reliability or control accuracy is particularly required, please contact our sales representative. Azbil Corporation will not bear any responsibility for the results produced by the operators.

Warnings and Cautions

**WARNING**
Alerts users that improper handling may cause death or serious injury.

**CAUTION**
Alerts users that improper handling may cause minor injury or material loss.

**Signs**

- **WARNING**
  Alerts users possible hazardous conditions caused by erroneous operation or erroneous use. The symbol inside △ indicates the specific type of danger. (For example, the sign on the left warns of the risk of electric shock.)

- **CAUTION**
  Notifies users that specific actions are prohibited to prevent possible danger. The symbol inside ○ graphically indicates the prohibited action. (For example, the sign on the left notifies that disassembly is prohibited.)

- **CAUTION**
  Instructs users to carry out a specific obligatory action to prevent possible danger. The symbol inside ● graphically indicates the actual action to be carried out. (For example, the sign on the left indicates general instructions.)

---

**WARNING**

- Before wiring and maintenance, be sure to turn off the power to the product. Failure to do so might cause electric shock or device failure.
- Be sure to ground the product with ground resistance of less than 100 Ω. Improper grounding might cause electric shock or malfunction.

---

**CAUTION**

- Install the product in a location that satisfies the operating conditions (temperature, humidity, power, vibration, shock, mounting direction, atmospheric condition, etc.) as listed in the specifications and use the product within the rated operating ranges. Failure to do so might cause fire or device failure.
- Installation and wiring must be performed by qualified personnel in accordance with all applicable safety standards.
- All wiring must comply with applicable codes and ordinances.
- Be sure to provide a circuit breaker for the power to the product as the product does not have a power switch. Take anti-lightening measures based on regional and building characteristics. Lightening might cause fire or critical damage to the products without the anti-lightening measures.
- To connect the wires to the screw terminals, use crimp terminal lugs with insulation. Failure to do so might cause fire due to short circuit or device failure.
- Firmly tighten the terminal screws. Insufficient tightening of the terminal screws might cause fire or overheating.
- Do not allow wire clippings, chips, and other refuses to enter into the product. Doing so might cause fire or product damage.
- Do not disassemble the product. Doing so might cause electric shock or device failure.
- Dispose of the product as industrial waste in accordance with your local regulations. Do not reuse all or part of this product.
System Configuration

ACTIVAL +™ Display Panel

Installation
This product is a panel-mount type converter. Install this product according to the following instructions.

Precautions for installation
- Install the product indoors.
- Do not place any flammable objects close to or under the product.
- Do not use the product in an atmosphere containing excessive humidity, acid gases, or corrosive substances.
- Use the product under the environmental and operating conditions specified in this document.
- Use the product at 2000 m altitude or lower.
- Do not block the vent holes of the product.
- Connect this product to a device suitable for the output impedance of this product.
- This product does not have a power switch. Provide a power circuit breaker for the power source of this product. Note that the power circuit breaker must be installed in a location close to this product and where you can operate the product without being disturbed.
- Use the dedicated socket.

Installation procedure
1) Mount the socket on a panel with a DIN rail or with the screws. To mount the socket with the screws, refer to Fig. 2. When you mount the socket, be careful with the orientation so that the socket is not mounted upside down. M4 x 15 screws are necessary to fix the socket.
2) Connect the wires to the terminals according to the Wiring section. Then, assemble the main unit with the socket by carefully inserting the main unit in the front of the socket. Do not forcefully press the main unit, diagonally insert the main unit, or insert the main unit upside down when you insert. Improper insertion might damage the pins of the main unit or the socket. After insertion, finger-tighten the main unit fixing screw.
Wiring

Wire specifications
Select the appropriate size, length, and type of wires corresponding to the following requirements.
- Communication line: JCS* 4364 instrument cable or equivalent
  (Model JKPEV-S 2P×0.9SQ (manufactured by Sumiden Hitach Cable Ltd.) is recommended.)
  *JCS: Japanese Electric Wire and Cable Makers’ Association
- Output line: 3 Ω or lower wiring resistance per line
- Power line: 3 Ω or lower wiring resistance per line

Wiring precautions
Check and follow your local indoor wiring rule or other regulations of your local government to perform wiring.

Wiring diagram
Fig. 3 is the wiring diagram of the terminals 1 to 11. Refer to Figs. 2 and 3 to connect the wires.

Notes:
- If a wire runs near a noise source, use shielded wire.
- Do not connect a terminator.
- Do not connect between the terminals 9 (DA) and 10 (DB).

Wiring example
The following example shows the wiring of 3 converters (Model RYY792C3001) and 1 Model FVY513_J/FVY514_J/FVY515_J.

Note:
* Shielded wire must be single-point grounded.
Setting

Master/slave switchover

Refer to Fig. 5 and change the MASTER/SLAVE switch to set the master/slave mode. (Upper: master, lower: slave)

Analog data setting

Refer to Fig. 5 and turn the analog output data setting switch (rotary switch) using a screwdriver to set the analog output data.

Set the analog output data for both of the primary output and the secondary output. The following table describes each switch indication and its corresponding analog data to output.

Table 1. Analog data switch indications and the analog data

<table>
<thead>

</table>

Notes:

*1 LED lights up in orange regardless of master/slave mode.
*2 LED stays ON in orange or green depending on the mode (master or slave) when the converter (Model RYY792C3001) abnormally stopped.

Inspection and Handling Precautions

**IMPORTANT:**

- This product is precision equipment. Do not drop or throw.
- This product contains electronic parts. Do not spray with or soak in water. Do not leave the product in a location with dew condensation.
- Housing of this product is made of plastic. Note that it may get deformed if being exposed to high heat.
- This product is highly-reliable precision equipment with high performance. Do not disassemble or remodel the product.

Inspection

Inspect that all the settings are correct every 2 years.
This product (Model RYY792C3001) complies with the following Electromagnetic Compatibility (EMC) and the Low Voltage Directive (LVD).

- **EMC (2004/108/EC)**
  - EN61326-1 Class A Table 2 (For use in an industrial electromagnetic environment)

- **LVD (2006/95/EC)**
  - EN61010-1/IEC61010-1
  - Overvoltage category II
  - Pollution degree 2

- This product is panel-mount type. Install the product inside a panel cabinet.
- Dielectric strength: Basic insulation between the communication and output, the output and chassis ground.
