## ALL STAINLESS STEEL LIMIT SWITCHES Model 1LS $\square$-J401

## Continuous use under water or

 in other harsh environments or corrosive gas atmospheres is possible.- Superior resistance to salt and corrosive gases
- May be used under water.

## APPLICATIONS

- Chemical plants (acid and alkali resistant)
- Harbor facilities (protected against salt water corrosion)
- Dams and floodgates

| ORDER GUIDE |  |  |  |
| :---: | :---: | :---: | :---: |
| Actuator |  | Cable type | Catalog listing |
| Name | Shape |  |  |
| Roller lever |  | None | 1LS1-J401 |
|  |  | 30 m | 1LS1-J401-03 |
|  |  | 50 m | 1LS1-J401-05 |
| Adjustable roller lever type |  | None | 1LS3-J401 |
|  |  | 30 m | 1LS3-J401-03 |
|  |  | 50 m | 1LS3-J401-05 |
| Without lever | - | None | 1LS2-J401 |
|  |  | 30 m | 1LS2-J401-03 |
|  |  | 50 m | 1LS2-J401-05 |

- Auxiliary actuators

| Name | Shape | Lever length (mm) | Catalog listing | Roller material |
| :---: | :---: | :---: | :---: | :---: |
| Roller lever |  | 38 | LS-6PA44-002 | Nylon |
|  |  | $-\quad 38$ | LS-6PA44-004 | Brass |

## PERFORMANCE

| Standards | Compliance | NECA C 4508 |
| :---: | :---: | :---: |
| Structure | Contact form | 2-circuit double break |
|  | Terminal type | M4 screw (switch terminal screw) |
|  | Contact type | Rivet |
|  | Protective structure | IP67 (IEC 60529, JIS C 0920) |
| Electrical performance | Electrical rating | See Table 1. |
|  | Between nonDielectric continuous terminals | 1,000 Vac, 50/60 Hz for 1 minute |
|  | strength Between each terminal and non-live metal part | 2,000 Vac, $50 / 60 \mathrm{~Hz}$ for 1 minute |
|  | Insulation resistance | Min. $100 \mathrm{M} \Omega$ (by 500 Vdc megger) |
|  | Initial contact resistance | Max. $50 \mathrm{~m} \Omega(6$ to 8 Vdc , thermal current 1A, voltage drop method) |
|  | Recommended min. contact operating voltage/current | $24 \mathrm{Vdc} 10 \mathrm{~mA}, 100 \mathrm{Vac} 10 \mathrm{~mA}$ |
| Mechanical performance | Actuator strength | Withstands load 5 times O.F. (operating direction for 1 minute) |
|  | Terminal strength | Withstands tightening force of $1.5 \mathrm{~N} \cdot \mathrm{~m}$ for 1 minute |
|  | Impact resistance | Contacts open for 1 ms max . at $300 \mathrm{~m} / \mathrm{s}^{2}$ in free position and total travel position |
|  | Vibration resistance | 1.5 mm peak-to-peak amplitude, frequency 10 to 55 Hz , for 2 continuous hours Contacts open for 1 ms max. in free position and total travel position. |
|  | Allowable operating speed | $1.7 \mathrm{~mm} / \mathrm{s}$ to $0.5 \mathrm{~m} / \mathrm{s}$ |
|  | Operating frequency | Max. 120 operations/minute |
| Life | Mechanical | Min. 2 million operations (with O.T. at $1 / 3$ to $2 / 3$ the rated value) |
|  | Electrical | Min. 100,000 operations (tested at rated load and operating freq. of 20 times/minute) |
| Ambient operating conditions | Temperature | -5 to $+70^{\circ} \mathrm{C}$ (freezing not allowed) |
|  | Humidity | Max. 98\% RH |
| Recommended tightening torque | Body | 5 to $6 \mathrm{~N} \cdot \mathrm{~m}$ (M5 hexagon socket head bolt) |
|  | Cover | 1.3 to $1.7 \mathrm{~N} \cdot \mathrm{~m}$ (M4 screw) |
|  | Head | 0.8 to $1.2 \mathrm{~N} \cdot \mathrm{~m}$ (M3.5 screw) |
|  | Lever | 4 to $5.2 \mathrm{~N} \cdot \mathrm{~m}$ (M5 hexagon socket head bolt) |
|  | Terminal screw | 1.3 to $1.4 \mathrm{~N} \cdot \mathrm{~m}$ (M4 binding head machine screw) |

LIMIT SWITCHES

## PRECAUTIONS FOR USE

## 1. Attaching switches

- Tighten each of the parts on the limit switch according to the appropriate tightening torques listed in the performance tables. Overtightening damages screws and other parts. On the other hand, insufficient tightening of screws lowers the effectiveness of the seal and reduces various performance characteristics.
- Do not leave or use covers and conduit parts open. Water, dirt, or dust may enter, which causing malfunction.
- Prevent impact to the lever body and head. Failure to do so might deform the actuator or cause defective switch return.
- Do not use silicone rubber electrical lead insulation, silicone adhesive or grease containing silicone. Doing so might result in defective electrical conductivity.

## 2. Wiring

- Do not perform wiring with the power ON. Doing so might cause electric shock, or the machine may start unexpectedly, causing an accident.
- Use crimp-type terminal lugs with covered insulation for electrical leads to prevent contact with covers and housings. If a crimp-type terminal lug contacts a cover, the cover may no longer shut or a ground fault may occur.
- Use sealed connectors (PA1 Series, etc. sold separately) or flexible tubing (PA3 Series) with IP67 or equivalent seal for conduits.
- Firmly tighten covers and conduits. If covers and conduits are not sufficiently tightened, the seal will be impaired and switch performance will no longer be assured.

## 3. Adjusting switches

- Do not apply excessive force (5 times O.F.) to the actuator beyond the total travel position. Doing so might damage the switch.
- Keep overtravel between $1 / 3$ to $2 / 3$ of the rated value. Small overtravel might cause the contacts to rattle due to vibration and impact, or may result in defective contact.

## 4. Environment

- Do not use the switch in an environment where strong acid or alkali is directly splashed onto it.

## 5. Other cautions

- Do not apply a lubricant to the sliding part of the actuator or any other component. Application of an inappropriate lubricant may degrade sliding performance or impair the protective structure.
- Remove any foreign substances adhering to the sliding part. Dust or any other foreign substance attached to the sliding part may cause a malfunction.
- Check the actual load.

To increase reliability, confirm that the switch has no problems in actual use before using the switch.
