

Advanced Transmitter Remote-sealed type of Differential Pressure Transmitters

Model GTX35R/GTX40R

OVERVIEW

Advanced Transmitter is a microprocessor-based smart transmitter that features high performance and excellent stability. Capable of measuring gas, liquid, and vapor, and liquid levels, it transmits 4 to 20 mA DC analog and digital signals according to the measured differential pressure.

It can also execute two-way communications between the communicator, thus facilitating self-diagnosis, range resetting, and automatic zero/span adjustment.

SFN, HART and FOUNDATION Fieldbus are available.

* Refer to SS2-GTX00Z-0100 for FOUNDATION Fieldbus type for the items marked with [★].

FEATURES

Excellent stability and high performance

- Long-term stability is proven in 500,000 installations worldwide.
- Unique characterization and composite semiconductor sensors realize excellent temperature and static pressure characteristics.

A diverse lineup

- A diverse flange lineup, ranging from ½ inch (15 mm) to 4 inches (100 mm), is available to meet user requirements.
- A wide range of models, including those for general purposes, high-temperature, and high temperature and high-vacuum service, is available to meet user requirements. In addition, the working temperature range of regular type has been expanded to 180 °C maximum to allow you greater freedom instrumentation.
- A wide variety of corrosion-resistant materials for wetted parts is also available.

Function to correct the temperature of the fill fluid of the capillary section

Changes in the density of the fill fluid caused by temperature fluctuations are calculated, and the output is corrected accordingly. This function substantially reduces (to 1/5 - 1/10) the effect of seasonal fluctuations in temperature.

Remote communication

- Two-way communication using digital output facilitates self-diagnosis, range resetting, automatic zero adjustment, and other operations.

Stability against supply voltage change

±0.005 % FS/V

Response time [★]

Approx. 700 ms (ref. value, with 5 m of ordinary capillaries, at room temp.)

Damping time [★]

Selectable from 0 to 128 sec. (HART)

Selectable from 0 to 32 sec. in ten stages (SFN)

Zero Stability

±0.5 % of URL per 10 year

Lightning protection [★]

Applicable Standards; IEC 61000-4-5

Peak value of current surge (80/20 μ sec.): 6000 A

Vibration characteristics:

Amplitude: 0.42 mm / Frequency: 5 to 60 Hz

Acceleration: 29.4 m/s² (3G)/60 to 200 Hz

Shock characteristics:

Acceleration 9.8 m/s² (1G)

Indicator

The digital LCD indicator (optional) shows the output in percentage or in engineering units. Range for engineering unit is from -99999 to 99999 when set at the factory, and from -19999 to 19999 when using the communicator.

Specify the following items when placing order with engineering units,

- Pressure range
- Engineering unit of pressure
- Method of display, either linear or square-root.

These data may be set or changed using the communicator.

OPTIONAL SPECIFICATIONS**FEP protective film**

Use FEP protective films when corrosive fluids are used or to inhibition migration from metal diaphragms.

Working temperature range

0 to 110 °C

Working pressure range

Atmospheric pressure to flange rating (up to JIS10K, ANSI/JPI 150) (Not usable under negative pressure)

Oil free finish

The transmitter is shipped with oil-free wetted parts.

External zero/span adjustment function

The transmitter can be easily adjusted to zero or span in the field.

Indicator must be selected to enable this option.

Fieldbus type does not have span adjustment.

Elbow

This is an adaptor for changing the electrical conduit connection port from the horizontal to the vertical direction, if required by wiring conditions in the field. One or two elbows may be used as needed.

Conformance to SI units

We deliver transmitters set to any SI units as specified.

Safety Transmitter

Select this option to be used as a component of Safety Instrument System (SIS).

Models GTX_ _ _ is complied with IEC61508, certified according to Safety Integrity Level 2 (SIL-2)

This option is not applicable for FOUNDATION Fieldbus type, DE communication type, external zero/span adjustment (option A2), and Alarm output (option Q7).

Alarm Output (contact output)

Contact output is prepared as alarm output when alarm (Output Alarm/Sensor Temp. Alarm) condition is detected. It can be set to or Normally Close.

Contact output type : One open collector (NPN)

Contact rating: 30 V DC max., 30 mA DC max.

Residual voltage at output ON: 3.0 V max.

Operating mode: Normally Open (default)

Normally Close is not recommended.

When this option is selected, CHECK terminals for current check cannot be used.

This option is not applicable for FOUNDATION Fieldbus type, and with intrinsic safety, Nonincendive types.

Advanced diagnostics [★]

This option is applicable for FOUNDATION Fieldbus type. Refer to SS2-GTX00Z-0100.

Custom calibration

Calibrate for the specified pressure range at the factory.

Long vent drain:

Maintenance, process conditions, and safety are addressed by using a drain whose length (60 mm) is longer than the standard length (27 mm).

Moisture-free finish (including oil-free finish):

Shipped with water content and oil content removed from the wetted part. (A small amount of fluorine oil is applied to vent/drain plugs in order to prevent sticking.)

Test report:

Shows the results of having tested the appearance, input output characteristics, insulation resistance, dielectric strength, etc., of the transmitter.

Mill sheet:

Shows data related to the chemical composition, heat treatment condition, and mechanical properties of the wetted part material.

Test report (with traceability certificate):

Comprised of three documents: a traceability diagram, a calibration certificate, and a test report.

Withstand pressure and air tight test (general-purpose use):

Shows the results of the wetted part withstand pressure test (10 minutes) and air tight test (10 minutes).

Strength calculation sheet:

Shows the results of having calculated the strength of the meter body cover, flanges, and bolts.

PHYSICAL SPECIFICATIONS**Materials****Fill fluid**

316L SST

Flange materials

304 SST, 316 SST, 316L SST

Mounting Bracket**Bracket**

304 SST

U-bolt and nuts

304 SST

Paint

Standard: Baked acrylic paint

Corrosion-proof: Baked urethane paint

Color

Housing: Silver N-8.2

Cap: azbil bordeaux 2.5R 2.25/5

Capillary section**Capillary tube length**

2, 3, 4, 5, 6, 7, 8, 9 and 10 m

2, 3, 4 and 5 m when flange diameter is flush diaphragm

2 inches (50 mm)/1 ½ inch (40 mm)

¾ inches (20 mm), 1/2 inches (15 mm)

extended diaphragm

3 inches (80 mm)/2 inches (50 mm)

Capillary tube material

316 SST

Armored tube material

304 SST

Coating (optional)

Olefin coating to improve corrosion resistance

(Not applicable for high-temperature/Vacuum service type and High-temperature/High-vacuum service type.)

Weight

Approx. 20.0 kg (Including ANSI 150# - 3 inches flange and capillary 5 m long)

INSTALLATION

Electrical connection

G 1/2 internal thread, 1/2 NPT internal thread, M20 internal thread.

Grounding

Resistance 100 Ω max.

Mounting

Direct mounting on the process side

Using 2-inch pipe mounting brackets: Mount the transmitter on a horizontal or vertical 2-inch pipe.

Process connection

Flange (both higher and lower pressure sides)

Flush diaphragm

JIS 10K, 20K, 30K and 63K: 40, 50, 80 mm(RF) equivalents
ANSI/JPI 150, 300 and 600: 1 ½, 2, 3 inches (RF) equivalents
ANSI/JPI 150 and 300: 1/2, 3/4 inches (RF) equivalents

Extended diaphragm

JIS 10K, 20K and 30K: 50, 80, 100 mm(RF) equivalents
ANSI/JPI 150, 300 and 600: 2, 3 inches (RF) equivalents
ANSI/JPI 150 and 300: 4 inches (RF) equivalents

Flange standard

JIS; JIS B 2220 (2004)
ANSI; ANSI B 16.5 (1988)
JPI; JPI-7S-15-93

TRANSMITTER HANDLING NOTES

To get the most from the performance this transmitter can offer, please use it properly noting the points mentioned below. Before using it, please read the Instruction Manual.

Transmitter installation notes

⚠ WARNING

- When installing the transmitter, ensure that gaskets do not protrude from connecting points into the process (such as adapter flange connection points and connecting pipes and flanges). Failure to do so may cause a leak of process fluid, resulting in harm from burns, etc. In addition, if the process fluid contains toxic substances, take safety measures such as wearing goggles and a mask to prevent contact with the skin and eyes and to prevent inhalation.
- Use the transmitter within the operating ranges stated in the specifications (for explosion-proofing, pressure rating, temperature, humidity, voltage, vibration, shock, mounting direction, atmosphere, etc.). Using the transmitter outside the operating conditions may cause device failure or fire, resulting in a harmful physical risk of burning or the like.
- When performing wiring work in explosion-proof areas, follow the work method specified in the explosion-proof guidelines.

⚠ CAUTION

- After installation, do not use the transmitter as a foothold or put your weight on it. Doing so may cause damage.
- Be careful not to hit the glass indicator with tools etc. This could break the glass and cause injury.
- The transmitter is heavy. Wear safety shoes and take care when installing it.
- Impact to transmitter can damage sensor module.

Wiring notes

⚠ WARNING

- To avoid shocks, do not perform electrical wiring work with wet hands or with live wires.

⚠ CAUTION

- Do wiring work properly in conformance with the specifications. Wiring mistakes may result in malfunction or irreparable damage to the instrument.
- Use a power supply that conforms to the specifications. Use of an improper power supply may result in malfunction or irreparable damage to the instrument.
- Use a power supply with overcurrent protection for this instrument.

Handling precautions for HART specification devices

- If you need to operate with a secondary host (HART communicator, etc.), set the communication interval of the primary host (DCS, device management system) to 8 seconds or more, or suspend communication from the primary host. If the primary host repeats HART communication within 8 seconds, the request from the secondary host may not be received (communication may not be possible).
- If electrical noise in the environment prevents HART communications with the host, take countermeasures such as separating the signal cables from the source of the noise, improving the grounding, changing to shielded signal cables, etc. Even if noise interferes with HART communications, the 4–20 mA analog signal will be unaffected and can be used for control.
- If this product is being operated in multidrop mode, there is a limit to the number of devices that can be used. If you are using multidrop mode, please consult with us.

Precautions when using Flushing rings

- If Flushing rings are used with this product, do not measure fluids such as toxic gas that have a harmful effect on human health if even a small amount leaks.

To use the remote seal type transmitter correctly

A various accuracy regulation and notes of the remote seal type transmitter are as follows.

A. Standard accuracy

Linearity in constant ambient temperature and constant static pressure is shown.
(Refer to "PERFORMANCE SPECIFICATIONS" on page 12)

B. Ambient temperature characteristics

Accuracy by the ambient temperature change in the main body under constant static pressure is shown. (Refer to "PERFORMANCE SPECIFICATIONS" on page 12)

C. Static pressure characteristics

Accuracy by the static pressure change under constant ambient temperature is shown.
(Refer to "PERFORMANCE SPECIFICATIONS" on page 12)

D. Wetted parts temperature characteristics

Zero shift is shown, when the temperature fluctuate of process wetted parts of an upper flange and lower flange changes.

Flange type	3 inches flush diaphragm flange, 4 inches Extended diaphragm flange		
Fill fluid	Regular/High temp.	High-temp. and vacuum	High-temp. and high-vacuum
Wetted parts temperature characteristics (zero shift of setting ranges)	$\pm \left\{ \left(600 + \frac{20L}{50} \right) \times \frac{1}{55} \times \frac{\Delta T}{1000x} \right\} \%$	$\pm \left\{ \left(900 + \frac{20L}{50} \right) \times \frac{1}{55} \times \frac{\Delta T}{1000x} \right\} \%$	$\pm \left\{ \left(1200 + \frac{30L}{50} \right) \times \frac{1}{55} \times \frac{\Delta T}{1000x} \right\} \%$
Flange type	2 inches flush diaphragm flange 3 inches Extended diaphragm flange		1/2 inch flush diaphragm flange 1 1/2 inch flush diaphragm flange 2 inches extended diaphragm flange
Fill fluid	Regular/High temp./ High-temp. and vacuum/High-temp. and high-vacuum		
Wetted parts temperature characteristics (zero shift of setting ranges)	$\pm \left\{ \left(10 \times (5 + 0.008L) \right) \times \frac{1}{2} \times \frac{\Delta T}{1000x} \right\} \%$		$\pm \left\{ 10 \times (5 + 0.008L) \times \frac{\Delta T}{1000x} \right\} \%$

x: Shown for each item are the percentage ratio for x (kPa), which is the greatest value of either the upper range value (URV)*¹, the lower range value (LRV)*² or the span.

L: Flange length (mm) (In case, standard flange; L=0 mm)

ΔT : Temperature difference between upper flange and lower flange.

E. Temperature characteristics of capillary tube

An integrated shift is shown, when temperatures difference is generated between the upper flange side capillary tube and the lower range capillary tube by the influence of the radiant heat and the sun light in the process.

Note) Take into account the shift when the transmitter is in the following conditions.

- One side of the capillary tube is in the sun and the other side of the capillary tube is in the shade.
- Radiant heat in the process hits one side of the capillary tube.

When a temperature difference is large between the upper flange side capillary tube and the lower flange side capillary tube, take the following typical measures against the differences.

- Arrangement of the capillary tubes
- Use of moistunizing material
- Use of shielding plates against the radiant heat

Flange type	3 inches flush diaphragm flange 4 inches Extended diaphragm flange	2 inches flush diaphragm flange 3 inches Extended diaphragm flange	1 1/2 inch flush diaphragm flange 2 inches extended diaphragm flange
Fill fluid	Regular/High temp./ High-temp. and vacuum/High-temp. and high-vacuum		
Temperature characteristics of capillary (zero shift of setting ranges)	$\pm \left(1.6 \times \frac{\Delta l \times \Delta T}{x} \right) \%$	$\pm \left(3.0 \times \frac{\Delta l \times \Delta T}{x} \right) \%$	$\pm \left(7.1 \times \frac{\Delta l \times \Delta T}{x} \right) \%$

Flange type	1/2 inch and 3/4 inch flush diaphragm flanges		
Flange selection	1, 3	5	6
Fill fluid	Regular/High temp.		
Temperature characteristics of capillary (zero shift of setting ranges)	$\pm \left(7.1 \times \frac{\Delta l \times \Delta T}{x} \right) \%$	$\pm \left(1.2 \times \frac{\Delta l \times \Delta T}{x} \right) \%$	$\pm \left(0.7 \times \frac{\Delta l \times \Delta T}{x} \right) \%$

x: Shown for each item are the percentage ratio for x (kPa), which is the greatest value of either the upper range value (URV)*¹, the lower range value (LRV)*² or the span.

L : Length of capillary tube with temperature difference.

ΔT : Temperature difference between upper flange and lower flange.

Note) *1. URV denotes the process value for 100 % (20 mA DC) output.

*2. LRV denotes the process value for 0 % (4 mA DC) output.

F. Temperature correction function of capillary part.

The change in the density (ρ) of fill fluid is operated. As a result, the output correction is done.

[Setting method]

The height (L) between flanges of the tank is set. Please specify it when you understand height beforehand. It is not possible to set it before shipping when height is not specified. Please apply the minus to the setting of height (L) when you set up a high pressure side under the tank.

G. Installation position of Remote-sealed differential pressure transmitters.

Azbil Corporation is recommended to set up the main body of the transmitter from a lower flange downward when the transmitter is set up to the sealed tank. Please meet the following requirements when it is necessary to set up the transmitter by all means in the middle of the tank.

$$P_o + ((-\rho' h)) / 102 \geq P \quad (1 \text{ kPa} = 102 \text{ mmH}_2\text{O})$$

$$\therefore (h \leq (P_o - P) / (102 / \rho'))$$

P : Permissible pressure lower bound value of the transmitter (kPa abs.)

ρ' : Fill fluid gravity of the transmitter

P_o : Pressure in tank (kPa abs.)

h : Distance from a lower flange (mm)

	Fill fluid gravity ρ'	Permissible pressure lower bound value P (kPa abs.)	Temperature range of wetted parts (°C)
Regular service	0.935	2	-40 to +40
High temp.	1.07	2	-5 to +90
High-temp. and vacuum	1.07	0.1333	-5 to +100
High-temp and high-vacuum	1.09	0.1333	10 to 250
Oxygen, Chlorine	1.87	54	-10 to +40

Note:

1. Special care is required for applications in which the pressure in the tank (P_o) changes to vacuum pressure.
2. If the above conditions are violated, negative pressure exceeding the working pressure range will be applied to the surface of the diaphragm. Since the negative pressure also exceeds the saturated vapor pressure of the fill fluid, bubbles will develop in the fill fluid, causing a zero point shift. Also, if the diaphragm is pulled under negative pressure, it may be deformed or broken.
3. If the fill fluid temperature exceeds the temperature range of the wetted parts in the above table, the lower limit of the permissible pressure range will also change. Refer to the product specifications.

Tank level instrumentation with direct mounting kit

Precautions

- *1. When installing the protective pipe upward as shown in the figure below, be sure to specify the olefin coating on the capillary tube. If a capillary tube without the olefin coating is used, set the capillary withdrawal direction below the horizontal.
- *2. Do not twist the capillary tube when bending it as shown in the figure. Also, the minimum bend diameter is about 5 cm. Do not use excessive force to bend the tube beyond this amount.
- *3. Three tube clamps are provided as an option. Use them to attach the tube in any desired position, while referring to the figure. Do not tighten the capillary tube so strongly that it is deformed.
- *4. Before doing zero adjustment using the communicator, be sure to set height L (in meters) between the flanges to enable the temperature compensation function of the fill fluid.

PERFORMANCE SPECIFICATIONS

Max working pressure

- Note) 1. Max. working pressure depends on flange rating, flange materials and operating temperature. Please refer to the following data.
Operating range of temperature depends on specification of transmitters.
2. Max. working pressure depends on the smaller value of either 1.5 MPa or following data.
3. Max. working pressure depends on the smaller value of either 10 MPa or following data.

Reference accuracy

Shown for each item are the percentage ratio for x (kPa), which is the greatest value of either the upper range value (URV)*¹, the lower range value (LRV)*² or the span.

Model GTX35R (for regular type/high-temperature service/oxygen service)

Material of wetted parts: 316 SST, 316L SST

Flange size: Flush diaphragm 3 inches (80 mm) Extended diaphragm 4 inches (100 mm)

Reference accuracy * ⁴		$\pm 0.2 \%$	(For $x \geq 12.5$ kPa {50 inH ₂ O})
		$\pm \left(0.05 + 0.15 \times \frac{12.5}{x} \right) \%$	(For $x < 12.5$ kPa {50 inH ₂ O})
Ambient Temperature effect (Shift from the set range) Change of 30 °C (Range from -5 to +55 °C)	Combined shift	$\pm 0.71 \%$	(For $x \geq 25$ kPa {100 inH ₂ O})
		$\pm \left(0.38 + 0.33 \times \frac{25}{x} \right) \%$	(For $x < 25$ kPa {100 inH ₂ O})
Static pressure effect (Shift from the set range) Change of 7 MPa {1,015 psi}	Zero shift	$\pm \left(0.03 + 0.72 \times \frac{25}{x} \right) \%$	x : kPa
	Combined shift	$\pm 1.00 \%$	(For $x \geq 25$ kPa {100 inH ₂ O})
		$\pm \left(0.03 + 0.97 \times \frac{25}{x} \right) \%$	(For $x < 25$ kPa {100 inH ₂ O})

Model GTX40R (for regular type/high-temperature service/oxygen service)

Material of wetted parts: 316 SST, 316L SST

Flange size: Flush diaphragm 3 inches (80 mm) Extended diaphragm 4 inches (100 mm)

Reference accuracy * ³ * ⁴		$\pm 0.2 \%$	(For $x \geq 210$ kPa {30 psi})

- *1. In case "Tantalum" is used for diaphragm material and in case of "For high-temperature service", normal operating temperature of wetted parts is -10 to +180 °C
- *2. In case code J is selected, code C "Tantalum" of Wetted parts material should be selected.
- *3. Not applicable for the combination with code A2 "With external Zero/Span adjustment", Q1 "Safety Transmitter", and Q2 "NAMUR NE43 Compliant Output signal limits" of Option.
- *4. Not applicable for the combination with code Q1 "Safety Transmitter" and Q2 "NAMUR NE43 Compliant Output signal limits" of Option.
- *5. In case code A of indicator is selected, code A2 of Option code should be selected.
- *6. In case: Basic Model is GTX35R, and Tantalum is used for diaphragm material and Flange size is "Flush Diaphragm 1 1/2 in./40 mm", minimum Span will be 10 kPa.
- *7. In case code D "1.5 in." or E "2 in." of Flange size selected, Specifications for Capillary Length 4 m and 5 m are as follows;
 a. Temperature effect and Static pressure effect will be 1.5 times of those of High-temperature service.
 b. Ambient temperature range for Regular service: -0 to +55 °C, Temperature of wetted parts: -0 to +110 °C.
 c. Ambient temperature range for Oxygen service: -0 to +55 °C, Temperature of wetted parts: -0 to +110 °C.
 d. In the case, Ambient temperature is 40 °C, the highest wetted parts temperature for High-temp service (4 m) will be 280 °C.
 e. In the case, Ambient temperature is 38 °C, the highest wetted parts temperature for High-temp service (5 m) will be 280 °C.
- *8. This length can only be selected code F "3 in." of Flange size.
- *9. Not applicable for the combination with code YB "Assembled in China (for use in China)" and YD "Assembled in China (for use outside of China)" of Option.
- *10. Code "YB" or "YD" of Option code should be selected.

*1. Code 3:Long Vent (60mm) of Options must be selected.

*2. When this option is selected, the same option for transmitter must be selected.

DIMENSIONS

Model GTX35R/GTX40R

Unit: mm

Note) 1. To prevent vibration, you are recommended to fasten the capillary tube mid-length.

2. Select a gasket that will not contact the diaphragm after it is tightened.

3. When the suppression is larger than one half of the measuring span, the higher pressure side and the lower pressure side of the process connection end flange are opposite to those shown in the figure above. When using the transmitter to measure liquid levels, connect at H and L marks on the meter body as shown in the right figure.

TERMINAL CONNECTION

(Not applicable for Fieldbus. See SS2-GTX00Z-0100 for Fieldbus.)

Table 1: Terminal connection

Symbol	Details
S+	Power supply and output signal +
S-	Power supply and output signal -/Check meter -
CHK/AL	Check meter +
